Changzhou Fulling Motor Co., Ltd was established in year 2001 as a joint venture of Germany - Swiss - China. We are a professional motor manufacturer in Changzhou city, China. Our Company offers four major series of products: Hybrid stepper motors, DC brushless motors, Servo motors and the motor drivers. Production capacity exceeds more than 6.5 million motors per year. Changzhou Fulling Motor Co., Ltd also has several joint venture companies who specialized in the production of PM stepper motors, and DC gear motors.

We sell nearly 7.5 million different motors to customers worldwide every year. Our products are widely used on industrial automation, AGV, robots, textile, printing, medical equipments, logistics, communication, household appliances and automobile etc. We export our motors to more than 30 countries such as Italy, Germany and United States.

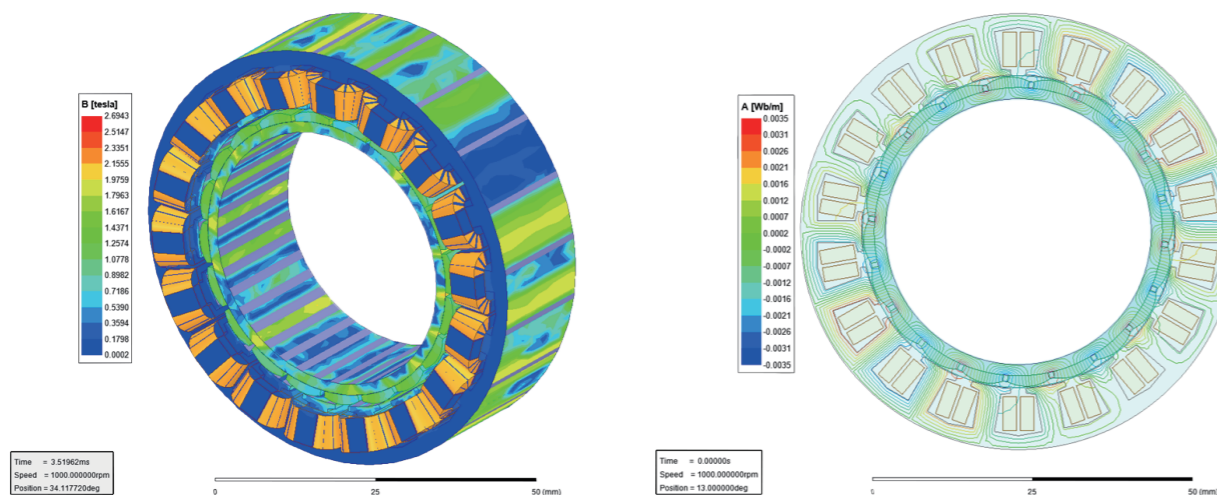

At the core of our development is a professional engineering team that comprises industry experts in the fields of design and application engineering. We provide these talented individuals with access to advanced technology and cutting-edge equipment, ensuring the yield of high-quality products. Our company has successfully passed the quality management system certification for the ISO9001, IATF16949 and ISO14001, which were authorized by the German TUV group. All products are RoHS compliant and CE certified; some are UL approved. Fulling declares no 3TG intentionally added or used in the products or in the production process.

Fulling insists the quality first, innovation and social responsibility as company's concept of development and continues to provide global customers with specialized control motor manufacturing and R&D services.

采用多极多槽方案 Multi-pole and multi-slot solution

- 实现电机的高转矩密度和低齿槽转矩输出,使结构更加紧凑、运行更加平稳
Realize the high torque density, low output cogging torque, more compact structure and more stable operation of the motor.

采用真空灌胶工艺 Vacuum glue-filling processing

- 辅助高导热系数灌封胶,使电机散热更加优越,温升更低。
With the aid of high heat conductivity coefficient glue, realize superior heat dissipation and lower temperature rise.

HALL组件和定子组件高度集成化 Highly integrated HALL and stator assembly

- 实现电机的超薄化设计
Realize the ultra-thin design of the motor

转子特殊化设计 Special design on rotor part

- 最小定转子气隙可达0.25mm,
Min. air gap of stator and rotor up to 0.25 mm

磁钢正弦化设计,
Sinusoidal design on magnetic steel
